

# Teaching & Learning Plans

## Integers

Junior Certificate Syllabus

# The Teaching & Learning Plans are structured as follows:

**Aims** outline what the lesson, or series of lessons, hopes to achieve.

**Prior Knowledge** points to relevant knowledge students may already have and also to knowledge which may be necessary in order to support them in accessing this new topic.

**Learning Outcomes** outline what a student will be able to do, know and understand having completed the topic.

**Relationship to Syllabus** refers to the relevant section of either the Junior and/or Leaving Certificate Syllabus.

**Resources Required** lists the resources which will be needed in the teaching and learning of a particular topic.

**Introducing the topic** (in some plans only) outlines an approach to introducing the topic.

**Lesson Interaction** is set out under four sub-headings:

- i. **Student Learning Tasks – Teacher Input:** This section focuses on possible lines of inquiry and gives details of the key student tasks and teacher questions which move the lesson forward.
- ii. **Student Activities – Possible Responses:** Gives details of possible student reactions and responses and possible misconceptions students may have.
- iii. **Teacher's Support and Actions:** Gives details of teacher actions designed to support and scaffold student learning.
- iv. **Assessing the Learning:** Suggests questions a teacher might ask to evaluate whether the goals/learning outcomes are being/have been achieved. This evaluation will inform and direct the teaching and learning activities of the next class(es).

**Student Activities** linked to the lesson(s) are provided at the end of each plan.

# Teaching & Learning Plan: Integers

## Aims

- To familiarise students with addition, subtraction, multiplication and division of integers
- To engage students in activities that will help their mental arithmetic using integers
- To engage students with the everyday uses of integers

## Prior Knowledge

Prior knowledge and experience of handling addition, subtraction, multiplication and division of natural numbers

- addition and subtraction of natural numbers from primary school
- positive and negative numbers on a number line
- addition of simple positive and negative numbers with the aid of a number line

**Note:** The notation encountered by students at primary level is different to the standard notation used at post-primary level. For example,  $+5 + -7$ , is read as positive 5 and negative 7. It may be an idea to start students with this notation initially when dealing with integers. For example  $-6 + -7$  (read as negative 6 plus negative 7) gives  $-13$  (read as negative 13).

## Learning Outcomes

As a result of studying this topic, students will be able to:

- investigate the properties of arithmetic, commutative, associative and distributive properties and the relationships between operations including inverse operations
- appreciate the order of operations, including brackets
- investigate models such as the number line to illustrate the operations of addition, subtraction, multiplication and division in  $\mathbb{Z}$
- explore some of the laws that govern these operations and use mathematical models to reinforce the algorithms they commonly use

## Catering for Learner Diversity

In class, the needs of all students, whatever their level of ability level, are equally important. In daily classroom teaching, teachers can cater for different abilities by providing students with different activities and assignments graded according to levels of difficulty so that students can work on exercises that match their progress in learning.

Less able students, may engage with the activities in a relatively straightforward way while the more able students should engage in more open-ended and challenging activities. Selecting and assigning activities appropriate to a student's ability will cultivate and sustain his/her interest in learning. In interacting with the whole class, teachers can employ effective and inclusive questioning. Questions can be pitched at different levels and can move from basic questioning to ones which are of a higher order nature.

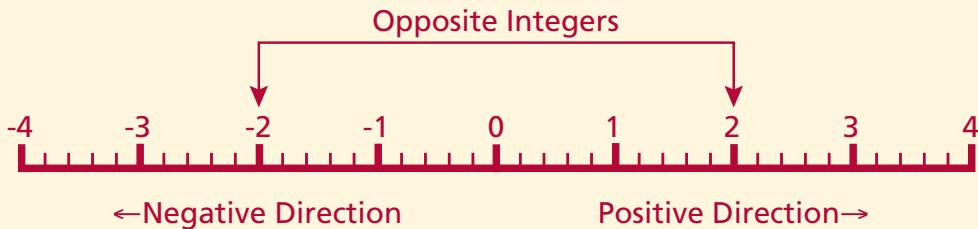

## Relationship to Junior Certificate Syllabus

Topic Number	Description of topic <i>Students learn about</i>	Learning outcomes <i>Students should be able to</i>
1.6 Number Systems $\mathbb{Z}$ : the set of integers, including 0.	<p>The binary operations of addition, subtraction, multiplication, and division and the relationships between these operations, beginning with whole numbers and integers. They explore some of the laws that govern these operations and use mathematical models to reinforce the algorithms they commonly use.</p>	<ul style="list-style-type: none"> <li>• investigate models such as decomposition, skip counting, arranging items in arrays and accumulating groups of equal size to make sense of the operations of addition, subtraction, multiplication and division, in <math>N</math> where the answer is in <math>N</math></li> <li>• investigate the properties of arithmetic: commutative, associative and distributive laws and the relationships between them including their inverse operations</li> <li>• appreciate the order of operations, including the use of brackets</li> <li>• investigate models such as the number line to illustrate the operations of addition, subtraction, multiplication and division in <math>\mathbb{Z}</math></li> </ul>

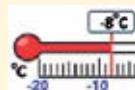

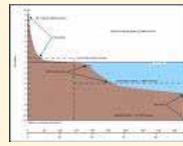

## Introducing the Topic

Students should be familiar with the concept of directed numbers from primary school. The number line with directed numbers on it will reinforce concepts learned at the primary level.

## Real Life Context

The following examples could be used to explore real life contexts.

- Temperature 
- Money e.g. Owing €10 being the same as -10
- Golf scores 
- Heights above and below sea level 
- Counter on a DVD player or rewinding live TV

<h2 style="text-align: center;">Lesson Interaction</h2>			
Student Learning Tasks: Teacher Input	Student Activities: Possible Responses	Teacher's Support and Actions	Assessing the Learning
<b>Section A: Number Line</b>			
<ul style="list-style-type: none"> <li>» In this lesson we will be investigating positive and negative whole numbers.</li> <li>» Where have you used, or seen the use of, negative whole numbers?</li> </ul>	<ul style="list-style-type: none"> <li>• Temperature.</li> <li>• Golf scores.</li> <li>• Rewinding live TV.</li> <li>• Depth below sea level.</li> <li>• Credit Union book displaying deposits or borrowings.</li> </ul>	<ul style="list-style-type: none"> <li>» If the students have no suggestions, ask a few leading questions such as "What was the lowest temperature last winter?" or "Does anybody know what was the lowest score Rory McIlroy shot?"</li> </ul>	<ul style="list-style-type: none"> <li>» Did students come up with several varied suggestions?</li> </ul>
<ul style="list-style-type: none"> <li>» We will now begin by looking at a number line.</li> <li>» Working in pairs, draw a number line from -12 to +12 on a blank sheet of squared paper.</li> <li>» Does the number line begin at -12 and finish at +12?</li> </ul>	<ul style="list-style-type: none"> <li>• We marked in from -12 to 12 but the number line keeps going on in both directions.</li> </ul>	<ul style="list-style-type: none"> <li>» Ask a student to draw a number line on the board going from -12 to +12.</li> <li>» Check the number lines drawn by the students to see if they have put in the arrows at each end.</li> <li>» Check to ensure that the positive and negative numbers are in the correct places.</li> </ul>	<ul style="list-style-type: none"> <li>» Do students realise that number lines extend indefinitely in both directions?</li> <li>» Are students putting negative numbers to the left of the zero and positive numbers to the right of zero?</li> </ul>

Student Learning Tasks: Teacher Input	Student Activities: Possible Responses	Teacher's Support and Actions	Assessing the Learning
<b>Section B: Ordering</b>			
<ul style="list-style-type: none"> <li>» Is -3 greater than 3? Can you give me some everyday examples to verify your answers?</li> </ul>	<ul style="list-style-type: none"> <li>• -3°C is lower than 3°C.</li> <li>• Owing €3 is worse than having €3.</li> </ul>		<ul style="list-style-type: none"> <li>» Can students come up with varied, real life examples?</li> </ul>
<ul style="list-style-type: none"> <li>» Do you understand the difference between the symbols &gt; and &lt; ?</li> <li>» How do you remember which is which?</li> <li>» Working on your own, do <b>Section B: Student Activity 1</b>.</li> </ul>	<ul style="list-style-type: none"> <li>• Greater than or less than</li> <li>• The open side is always facing the biggest number.</li> </ul>	<ul style="list-style-type: none"> <li>» Draw the symbols &gt; and &lt; on the board.</li> <li>» Ask some students to put examples on the board.</li> <li>» Allow for discussion on the best way to remember which is which.</li> <li>» Distribute <b>Section B: Student Activity 1</b>.</li> <li>» As students are filling in <b>Student Activity 1</b>, circulate to monitor progress.</li> </ul>	<ul style="list-style-type: none"> <li>» Can students use the &gt; and &lt; signs without too much hesitancy?</li> </ul>

Student Learning Tasks: Teacher Input	Student Activities: Possible Responses	Teacher's Support and Actions	Assessing the Learning
<b>Section C: Addition and Subtraction</b>			
<ul style="list-style-type: none"> <li>» Starting at zero on your number line, go 3 places in the positive direction. What number are you now at?</li> <li>» In which direction did you move?</li> <li>» Write down a mathematical sentence to describe this.</li> <li>» Starting at +4 on your number line, go 3 places in the negative direction. What number are you now at?</li> <li>» Write down a mathematical sentence to describe this.</li> <li>» Starting at -5 on your number line go 4 places in the negative direction. What number are you now at?</li> <li>» Write down a mathematical sentence to describe this.</li> <li>» Complete <b>Section B: Student Activity 2</b>.</li> </ul>	<ul style="list-style-type: none"> <li>• +3</li> <li>• To the right</li> <li>• <math>0 + 3 = 3</math></li> <li>• 1</li> <li>• <math>+ 4 - 3 = 1</math></li> <li>• -9</li> <li>• <math>- 5 - 4 = -9</math></li> </ul>	<ul style="list-style-type: none"> <li>» Encourage the use of number lines.</li> <li>» Take answers from different students and ask them to show how they arrived at their answer using the number line on the board.</li> <li>» Ask a wide range of questions to ensure students are well practised in using the number line.</li> <li>» Distribute <b>Section B: Student Activity 2</b>.</li> <li>» Circulate and listen to what students are saying.</li> </ul>	<ul style="list-style-type: none"> <li>» Are students using the number line to get the answers?</li> <li>» Are students comfortably using the correct directions on the number lines?</li> </ul>

Student Learning Tasks: Teacher Input	Student Activities: Possible Responses	Teacher's Support and Actions	Assessing the Learning
<b>Section D: Multiplication of positive and negative integers</b>			
<ul style="list-style-type: none"> <li>» We are going to have a look at what happens when positive and negative numbers are multiplied together.</li> <li>» Can anyone give me an example of a sentence where 'two negatives make a positive'?</li> </ul>	<ul style="list-style-type: none"> <li>• "I can't not go" means you have to go.</li> <li>• "I haven't got no money" means you have money.</li> <li>• "I ain't having none of it" means you're having some of it.</li> </ul>	<ul style="list-style-type: none"> <li>» Remind students about what happens in the English language when you have two negatives.</li> <li>» Facilitate a discussion on how 'two negatives make a positive' in language.</li> </ul>	
<ul style="list-style-type: none"> <li>» If we think about money, owing money is negative. What's another way of saying 'owing money'.</li> <li>» Is being 'in debt' positive or negative?</li> <li>» Is 'taking away' positive or negative?</li> <li>» So if we take away a debt, are we using positives or negatives?</li> <li>» If we compare this to the language example, what type of answer will we get?</li> <li>» Which direction would 'taking away a debt' go on a numberline?</li> <li>» Working in pairs, complete <b>Section D: Student Activity 3</b>.</li> </ul>	<ul style="list-style-type: none"> <li>• Being in debt</li> <li>• Negative</li> <li>• Negative</li> <li>• Two negatives</li> <li>• If it's two negatives, it makes a positive?</li> <li>• To the right</li> </ul>	<ul style="list-style-type: none"> <li>» Draw a number line on the board and ask students to show examples of taking away a debt.</li> <li>» Distribute <b>Section D: Student Activity 3</b>.</li> <li>» Allow students to present their work and facilitate discussion and questions from other groups.</li> </ul>	<ul style="list-style-type: none"> <li>» Are students comfortable with 'two negatives making a positive'?</li> </ul>

Student Learning Tasks: Teacher Input	Student Activities: Possible Responses	Teacher's Support and Actions	Assessing the Learning
» What about - (-6)		<ul style="list-style-type: none"> <li>» Use the Powerpoint show available at <a href="http://www.projectmaths.ie">www.projectmaths.ie</a></li> <li>OR</li> <li>Use the method outlined in <b>Appendix 1, Class Demonstration.</b></li> <li>» Have a number line on the wall, projected or as a poster, and relate this exercise to the number line.</li> <li>» Guide the students language towards using zero rather than nothing.</li> </ul>	<ul style="list-style-type: none"> <li>» Can students relate the demonstration to the operations on the number line?</li> <li>» Are students using zero instead of nothing by the end of the lesson?</li> </ul>
		<ul style="list-style-type: none"> <li>» For practise, do the first exercise in <b>Appendix 2, Mental Maths,</b> with the students.</li> </ul>	
» Working in pairs, complete <b>Section D: Student Activity 4.</b>		<ul style="list-style-type: none"> <li>» Distribute <b>Section D: Student Activity 4.</b></li> <li>» As you circulate, ask the students to explain their solutions i.e. verbalise their reasoning.</li> <li>» Ask individual students to write the solutions on the board and explain what they are doing.</li> </ul>	<ul style="list-style-type: none"> <li>» Are students becoming familiar with the operations and relevance of the signs outside the brackets?</li> <li>» Are students able to answer the questions without too much hesitancy?</li> </ul>

Student Learning Tasks: Teacher Input	Student Activities: Possible Responses	Teacher's Support and Actions	Assessing the Learning																																												
<b>Section E: Multiplication of positive and negative integers</b>																																															
<ul style="list-style-type: none"> <li>» Complete Tables 1 and 2, from <b>Section E: Student Activity 5</b>.</li> </ul>	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th data-bbox="496 377 631 414">3 Times</th> <th data-bbox="631 377 900 414">Result</th> </tr> </thead> <tbody> <tr><td data-bbox="496 414 631 450"><math>3 \times 4</math></td><td data-bbox="631 414 900 450"><math>= 12</math></td></tr> <tr><td data-bbox="496 450 631 487"><math>3 \times 3</math></td><td data-bbox="631 450 900 487"><math>= 9</math></td></tr> <tr><td data-bbox="496 487 631 524"><math>3 \times 2</math></td><td data-bbox="631 487 900 524"><math>= 6</math></td></tr> <tr><td data-bbox="496 524 631 560"><math>3 \times 1</math></td><td data-bbox="631 524 900 560"><math>= 3</math></td></tr> <tr><td data-bbox="496 560 631 597"><math>3 \times 0</math></td><td data-bbox="631 560 900 597"><math>= 0</math></td></tr> <tr><td data-bbox="496 597 631 635"><math>3 \times (-1)</math></td><td data-bbox="631 597 900 635"><math>= -3</math></td></tr> <tr><td data-bbox="496 635 631 671"><math>3 \times (-2)</math></td><td data-bbox="631 635 900 671"><math>= -6</math></td></tr> <tr><td data-bbox="496 671 631 708"><math>3 \times (-3)</math></td><td data-bbox="631 671 900 708"><math>= -9</math></td></tr> <tr><td data-bbox="496 708 631 744"><math>3 \times (-4)</math></td><td data-bbox="631 708 900 744"><math>= -12</math></td></tr> <tr><td data-bbox="496 744 631 781"><math>3 \times (-5)</math></td><td data-bbox="631 744 900 781"><math>= -15</math></td></tr> </tbody> </table> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th data-bbox="496 870 631 906">5 Times</th> <th data-bbox="631 870 900 906">Result</th> </tr> </thead> <tbody> <tr><td data-bbox="496 906 631 943"><math>5 \times 4</math></td><td data-bbox="631 906 900 943"><math>= 20</math></td></tr> <tr><td data-bbox="496 943 631 979"><math>5 \times 3</math></td><td data-bbox="631 943 900 979"><math>= 15</math></td></tr> <tr><td data-bbox="496 979 631 1016"><math>5 \times 2</math></td><td data-bbox="631 979 900 1016"><math>= 10</math></td></tr> <tr><td data-bbox="496 1016 631 1052"><math>5 \times 1</math></td><td data-bbox="631 1016 900 1052"><math>= 5</math></td></tr> <tr><td data-bbox="496 1052 631 1089"><math>5 \times 0</math></td><td data-bbox="631 1052 900 1089"><math>= 0</math></td></tr> <tr><td data-bbox="496 1089 631 1125"><math>5 \times (-1)</math></td><td data-bbox="631 1089 900 1125"><math>= -5</math></td></tr> <tr><td data-bbox="496 1125 631 1162"><math>5 \times (-2)</math></td><td data-bbox="631 1125 900 1162"><math>= -10</math></td></tr> <tr><td data-bbox="496 1162 631 1198"><math>5 \times (-3)</math></td><td data-bbox="631 1162 900 1198"><math>= -15</math></td></tr> <tr><td data-bbox="496 1198 631 1235"><math>5 \times (-4)</math></td><td data-bbox="631 1198 900 1235"><math>= -20</math></td></tr> <tr><td data-bbox="496 1235 631 1271"><math>5 \times (-5)</math></td><td data-bbox="631 1235 900 1271"><math>= -25</math></td></tr> </tbody> </table>	3 Times	Result	$3 \times 4$	$= 12$	$3 \times 3$	$= 9$	$3 \times 2$	$= 6$	$3 \times 1$	$= 3$	$3 \times 0$	$= 0$	$3 \times (-1)$	$= -3$	$3 \times (-2)$	$= -6$	$3 \times (-3)$	$= -9$	$3 \times (-4)$	$= -12$	$3 \times (-5)$	$= -15$	5 Times	Result	$5 \times 4$	$= 20$	$5 \times 3$	$= 15$	$5 \times 2$	$= 10$	$5 \times 1$	$= 5$	$5 \times 0$	$= 0$	$5 \times (-1)$	$= -5$	$5 \times (-2)$	$= -10$	$5 \times (-3)$	$= -15$	$5 \times (-4)$	$= -20$	$5 \times (-5)$	$= -25$	<ul style="list-style-type: none"> <li>» Distribute <b>Section E, Student Activity 5</b>.</li> <li>» Circulate to monitor progress and guide or prompt where necessary.</li> </ul>

# Section B: Student Activity 1

## Ordering

1. Mark in all the integers from -12 to 12 on the number line shown below.

2. Use the number line above to say which is greater

- |                      |                    |                     |
|----------------------|--------------------|---------------------|
| (a) 0 or 7 _____     | (b) -1 or 2 _____  | (c) -6 or 7 _____   |
| (d) -4 or 2 _____    | (e) 7 or -5 _____  | (f) -10 or -2 _____ |
| (g) -10 or -12 _____ | (h) -5 or -6 _____ |                     |

3. Use the number line above to say which is smaller

- |                     |                     |                    |
|---------------------|---------------------|--------------------|
| (a) 1 or 4 _____    | (b) 7 or 5 _____    | (c) -6 or 8 _____  |
| (d) -4 or -2 _____  | (e) -7 or 6 _____   | (f) -8 or -2 _____ |
| (g) -10 or -3 _____ | (h) -8 or -12 _____ |                    |

4. Complete the statement: If one number is larger than another it lies \_\_\_\_\_ on the number line.

5. From the following groups, list the numbers from the highest to the lowest (i.e. in decreasing order)

- (i) 3, -5, 7, -3, 9. \_\_\_\_\_
- (ii) 8, -6, -2, -3, 5. \_\_\_\_\_
- (iii) -9, -7, 6, -3, -2. \_\_\_\_\_
- (iv) 4, -7, 0, -4, -5. \_\_\_\_\_

5. Which of the following temperatures are colder?

- (i) 8°C or 5°C \_\_\_\_\_
- (ii) -7°C or 2°C \_\_\_\_\_
- (iii) 0°C or 5°C \_\_\_\_\_
- (iv) -8°C or -5°C \_\_\_\_\_

6. Insert the correct symbol > or < between the following numbers.

Example: 10 > 5 because 10 is bigger than 5

- |                |                 |                  |
|----------------|-----------------|------------------|
| i) 14      5   | ii) -2      5   | iii) 7      -3   |
| iv) -10     -8 | v) -100    -102 | vi) 76      -76. |

# Section C: Student Activity 2

## Addition and Subtraction

1. The number line shows  $-4 + 6$  which gives 2

Use the number lines below to show the answers to the following questions. Show your work on the number lines.

i)  $2 + 4$

ii)  $-8 + 10$

iii)  $-6 + 5$

iv)  $-12 + 8$

v)  $-11 + 4$

2. Find the values of each of the following

i)  $2 + 7 =$  \_\_\_\_\_

ii)  $-5 + 7 =$  \_\_\_\_\_

iii)  $-7 + 2 =$  \_\_\_\_\_

iv)  $-3 + 1 =$  \_\_\_\_\_

v)  $-5 + 10 =$  \_\_\_\_\_

vi)  $-9 + 2 =$  \_\_\_\_\_

ii)  $-6 + 12 =$  \_\_\_\_\_

iii)  $-7 + 13 =$  \_\_\_\_\_

iv)  $-2 + 0 =$  \_\_\_\_\_

(v)  $-11 + 7 =$  \_\_\_\_\_

3. Explain how you got the answers to any one of the questions in question 2 above \_\_\_\_\_
- \_\_\_\_\_
- \_\_\_\_\_

# Section C: Student Activity 2 (continued)

4. The number line shows  $2 - 7$  which gives  $-5$

**Start**      **Backward Steps**      **Answer**

Use the number lines below to show the answers to the following questions. Show your work on the appropriate number line in each case.

i)  $5 - 4$

Answer \_\_\_\_\_

ii)  $12 - 10$

Answer \_\_\_\_\_

iii)  $-5 - 4$

Answer \_\_\_\_\_

iv)  $-2 - 8$

Answer \_\_\_\_\_

v)  $-9 - 4$

Answer \_\_\_\_\_

# Section C: Student Activity 2 (continued)

5. The table below shows the temperatures in a number of cities. If the temperature in Galway is  $15^{\circ}\text{C}$ , fill in the table below to find the temperature in the various cities.

CITY	Warmer/Colder	Temperature
Galway		$15^{\circ}\text{C}$
Dublin	$2^{\circ}$ colder than Galway	
Paris	$10^{\circ}$ warmer than Galway	
Moscow	$20^{\circ}$ colder than Galway	
New-York	$4^{\circ}$ warmer than Moscow	
Sydney	$25^{\circ}$ colder than Galway	
Cairo	$10^{\circ}$ warmer than Paris	
Oslo	$3^{\circ}$ colder than Moscow	

6. Find the values of each of the following.

- a)  $2 + (-4) + 5$  Answer \_\_\_\_\_
- b)  $7 + 6 + (-10)$  Answer \_\_\_\_\_
- c)  $8 + (-7) + (-6)$  Answer \_\_\_\_\_
- d)  $-2 + (-3) + (-3)$  Answer \_\_\_\_\_

7. Find the value of each of the following

- a)  $11 + (-2) + 3 + (-1) + 6 + (-4) + (-3)$  Answer \_\_\_\_\_
- b)  $-8 + 12 + (-2) + (-12) + 7 + (-7)$  Answer \_\_\_\_\_
- c)  $10 + (-2) + 14 + (-11) + 3 + (-8) + 12$  Answer \_\_\_\_\_

## Section C: Student Activity 2 (continued)

8. The scores, compared to par, for ten players in a golf tournament are listed in the following table. (See below for definition of par.)

Name	Round 1	Round 2	Round 3	Round 4	Total score compared to par
O'Brien	-2	-3	+3	Level (0)	
McCarthy	-1	+2	+2	+1	
Collins	Level (0)	Level (0)	-1	Level (0)	
O'Connor	+1	+2	-3	Level (0)	
Gallagher	-4	-1	+1	-2	
Ryan	+2	-2	Level (0)	+3	
Conneely	-1	Level (0)	-2	+4	
Cleary	-4	-3	-1	Level (0)	
Scanlon	+1	-3	Level (0)	-1	
Lyons	-3	+3	Level (0)	-1	

Use this table to answer the following questions

- i) Fill the total score, compared to par, for each player into the table above.
  
  
  
  
  
  
- ii) Which player had the lowest score? \_\_\_\_\_
  
  
  
  
  
  
- iii) Which player had the highest score? \_\_\_\_\_
  
  
  
  
  
  
- iv) Who is the best golfer, according to the above table? \_\_\_\_\_

**Definition:** Par is the number of strokes an expert golfer is expected to need to complete each individual hole, or all the holes on a golf course.

9. Mr. McKeon has €500 in his bank account. During the day he withdraws €275 from an ATM and a cheque for €370 is also debited from his account. What is the account balance at the end of the day?
- \_\_\_\_\_

# Section D: Student Activity 3

## Two Negatives

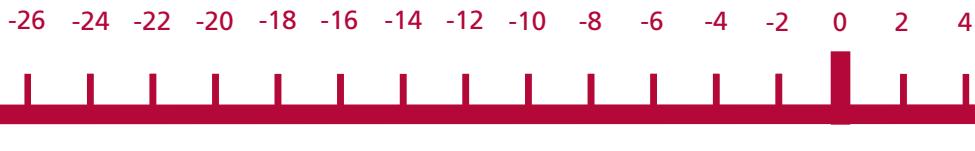

**Example:** Mary borrowed €20 from her brother and after doing some babysitting was able to pay back €12. How much did she owe then? €8

Write out a Mathematical Sentence to show this and illustrate the process on a number line.

$-20 + 12 = -8$  (Owing €20 and subsequently taking away €8 of the debt)

I took away €12 of the debt→

←I borrowed €20 from my brother

Use the number lines given to answer each of the following questions. In each case show your work on the number line. Write a Mathematical Sentence to illustrate your answers.

1. My sister had to borrow €100 from my Dad for her school tour. She paid him back €20 per week. How much did she owe at the end of the first week? \_\_\_\_\_

Mathematical Sentence\_\_\_\_\_

How many weeks did it take to pay back the full amount?\_\_\_\_\_

2. Joan borrowed €25 from her sister and promised to pay €30 in return. Her sister had €50 to begin with. How much did she have at the end? \_\_\_\_\_

Mathematical Sentence\_\_\_\_\_

# Section D: Student Activity 3 (continued)

3. i) I needed €42 and had to borrow €7 from each of my 6 friends. Illustrate this using a mathematical sentence.
- ii) I borrowed an additional €3 from one of them. Show in steps, on the number line how I paid him back in full.

Maths sentence (i) \_\_\_\_\_ Maths sentence (ii) \_\_\_\_\_

4. Look at the number line below. Write a story using two negatives. Indicate the direction on the number line and add to the diagram if necessary.

---

---

---

---

---

---

5. Using the same number line, write a story for a negative and a positive. Indicate the direction on the number line and add to the diagram if necessary.

---

---

---

---

---

---

# Section D: Student Activity 4

## Multiplication of Signs Outside Brackets

**1. Simplify by removing the brackets.**

- a)  $- (+ 1) = \underline{\hspace{2cm}}$    b)  $+ (-2) = \underline{\hspace{2cm}}$    c)  $- (-4) = \underline{\hspace{2cm}}$   
 d)  $+ (-8) = \underline{\hspace{2cm}}$    e)  $- (-12) = \underline{\hspace{2cm}}$    f)  $- (+ 5) = \underline{\hspace{2cm}}$

From the above, complete the following sentences.

A minus outside a bracket changes the \_\_\_\_\_ of the number inside the bracket.

A plus outside a bracket has no effect on the \_\_\_\_\_ of the number inside the bracket.

**2. Simplify each of the following by removing the brackets.**

Example:  $5 + (-1) = 5 - 1 = 4$

- a)  $4 + (-1) = \underline{\hspace{2cm}}$    b)  $6 + (-2) = \underline{\hspace{2cm}}$    c)  $5 - (-3) = \underline{\hspace{2cm}}$   
 d)  $7 + (-8) = \underline{\hspace{2cm}}$    e)  $12 - (-12) = \underline{\hspace{2cm}}$    f)  $0 - (+ 5) = \underline{\hspace{2cm}}$

**3. Simplify each of the following.**

- a)  $-3 + (-4) + 6 = \underline{\hspace{2cm}}$    b)  $-5 + 8 + (-3) = \underline{\hspace{2cm}}$    c)  $2 + (-6) + (-8) = \underline{\hspace{2cm}}$   
 d)  $-6 + (-4) + (-1) = \underline{\hspace{2cm}}$    e)  $9 - (-2) + 7 = \underline{\hspace{2cm}}$    f)  $11 + (-3) + 9 = \underline{\hspace{2cm}}$   
 f)  $13 + (-6) + 9 = \underline{\hspace{2cm}}$    g)  $-5 + (-5) + 3 = \underline{\hspace{2cm}}$    h)  $15 + (-12) + (-5) = \underline{\hspace{2cm}}$

**4. Simplify each of the following**

- a)  $4 - (-7) + 4 - (-5) = \underline{\hspace{2cm}}$   
 b)  $-9 - 2 (-5) - 4 (-3) = \underline{\hspace{2cm}}$   
 c)  $-7 - 4 (-4) - (-1) = \underline{\hspace{2cm}}$   
 d)  $-8 + 2 (-3) - (-7) + 2 = \underline{\hspace{2cm}}$

**5. Simplify each of the following**

- a)  $7 + (-1 + 2) - (6 - 4) = \underline{\hspace{2cm}}$   
 b)  $-8 - (-2 + 5) - (-1 - 2) = \underline{\hspace{2cm}}$   
 c)  $7 - (-2) - (2 - 1) = \underline{\hspace{2cm}}$   
 d)  $-13 + (5 - 5) - (-8 - 8) + 3 = \underline{\hspace{2cm}}$

# Section E: Student Activity 5

# Multiplication of Positive and Negative Integers

## Use number patterns to complete the following tables.

Table 1		
3 Times		Result
$3 \times 4$	= 12	Positive Answer
$3 \times 3$	= 9	Positive Answer
$3 \times 2$	=	
$3 \times 1$	=	
$3 \times 0$	= 0	0
$3 \times (-1)$	=	
$3 \times (-2)$	=	
$3 \times (-3)$	=	
$3 \times (-4)$	=	
$3 \times (-5)$	=	

Table 2		
5 Times		Result
$5 \times 4$	= 20	Positive Answer
$5 \times 3$	= 15	Positive Answer
$5 \times 2$	=	
$5 \times 1$	=	
$5 \times 0$	= 0	0
$5 \times (-1)$	=	
$5 \times (-2)$	=	
$5 \times (-3)$	=	
$5 \times (-4)$	=	
$5 \times (-5)$	=	

**Use the completed tables to fill in the appropriate term in the following sentences.**

- a) A positive number multiplied by a positive number gives a \_\_\_\_\_ number.
  
  - b) A positive number multiplied by a negative number gives a \_\_\_\_\_ number.

# **Section E: Student Activity 5** (continued)

**Use number patterns to complete the following tables.**

Table 3		
-2 Times		Result
$-2 \times 4$	$= -8$	Negative Answer
$-2 \times 3$	$= -6$	Negative Answer
$-2 \times 2$	$= -4$	
$-2 \times 1$	$=$	
$-2 \times 0$	$= 0$	0
$-2 \times (-1)$	$=$	
$-2 \times (-2)$	$=$	
$-2 \times (-3)$	$=$	
$-2 \times (-4)$	$=$	
$-2 \times (-5)$	$=$	

**Table 4**

-4 Times		Result
$-4 \times 4$	$= -16$	Negative Answer
$-4 \times 3$	$= -12$	Negative Answer
$-4 \times 2$	$= -8$	
$-4 \times 1$	$=$	
$-4 \times 0$	$= 0$	0
$-4 \times (-1)$	$=$	
$-4 \times (-2)$	$=$	
$-4 \times (-3)$	$=$	
$-4 \times (-4)$	$=$	
$-4 \times (-5)$	$=$	

**Use the completed tables to fill in the appropriate term in the following sentences.**

- a) A negative number multiplied by a positive number gives a \_\_\_\_\_ number.
  
  - b) A negative number multiplied by a negative number gives a \_\_\_\_\_ number.

# Section F: Student Activity 6

## Order of Operations - BIMDAS

- A mechanic charged a customer €45 for parts. He charged €15 per hour and it took 4 hours to fix the car. How much was the bill? \_\_\_\_\_
- $4 \times 6 + 2 + 3 \times 6 = 50$ . Add brackets, where appropriate, to make this statement correct.
- Mike cuts 6 lawns every Saturday. He charges €8 per lawn. Two of the houses always give him a €2 tip. How much will he earn after four Saturdays? \_\_\_\_\_  
Write out a mathematical sentence to represent this.  
\_\_\_\_\_
- In a factory, the standard rate per hour is €9.50. The rate for working on Saturday is €14 per hour. Circle the following statements which correctly represent working 36 hours at the standard rate and 6 hours of Saturday work? There may be more than 1 correct answer.
  - $9.50 \times 36 + 14 \times 6$
  - $9.50 \times (36 + 14) \times 6$
  - $9.50 + 14 \times 6 + 36$
  - $(14 \times 6) + (9.50 \times 36)$
  - $23.5 \times 42$

5.

A dry cleaners is trying to drum up business.

The following mathematical sentence represents Mary's bill and the special offer. Write out what Mary got cleaned and the special offer.

$$3 \times 12.50 + 8 + 2 \times 7.50 + 3 \times 15 - (2 \times 7.50)$$

- Use brackets, where necessary, to make the following correct.

- $23 + 2 \times 7 - 5 \times 4 = 17$  \_\_\_\_\_
- $23 + 2 \times 7 - 5 \times 4 = 680$  \_\_\_\_\_
- $23 + 2 \times 7 - 5 \times 4 = 128$  \_\_\_\_\_
- $23 + 2 \times 7 - 5 \times 4 = 200$  \_\_\_\_\_

# Section G: Student Activity 7

## Multiplying a Number of Integers

**Example 1:** Find the value of  $-7 \times (-4) \times 2$

$$\begin{array}{r} -7 \times (-4) \times 2 \\ \downarrow \quad \downarrow \quad \downarrow \\ +28 \quad \times 2 \\ \downarrow \quad \downarrow \\ +56 \end{array}$$

**Example 2:** Find the value of  $-1 \times (-3) \times (-2) \times (2)$

$$\begin{array}{r} -1 \times (-3) \times (-2) \times (2) \\ \downarrow \quad \downarrow \quad \downarrow \quad \downarrow \\ +3 \quad \times \quad -4 \\ \downarrow \quad \downarrow \\ -12 \end{array}$$

Complete the following questions on multiplication of integers.

1. Multiply each of the following.

- |                               |                             |                             |
|-------------------------------|-----------------------------|-----------------------------|
| a) $7 \times (-3) =$ _____    | b) $-8 \times (-1) =$ _____ | c) $3 \times (-4) =$ _____  |
| d) $-4 \times (-2) =$ _____   | e) $-9 \times (-4) =$ _____ | f) $5 \times (-3) =$ _____  |
| g) $(-2) \times (-3) =$ _____ | h) $5 \times (-5) =$ _____  | i) $-5 \times (-2) =$ _____ |
| j) $-6 \times (-3) =$ _____   | k) $5 \times (-8) =$ _____  | l) $-5 \times (-6) =$ _____ |

2. Simplify the following.

- |   |
|---|
| a) $5 \times (-1) \times (-3) =$ _____    |
| b) $-3 \times (-1) \times 4 =$ _____      |
| c) $(-3) \times (-4) \times (-4) =$ _____ |
| d) $-3 \times (-1) \times (-5) =$ _____   |

3. Simplify the following.

- |   |
|---|
| a) $6 \times (-3) \times (-2) \times (-4) =$ _____  |
| b) $-2 \times (-1) \times 4 \times (-6) =$ _____    |
| c) $-7 \times (-4) \times (-1) \times (-2) =$ _____ |
| d) $5 \times (-8) \times 4 \times (-6) =$ _____     |

# Section G: Student Activity 7 (continued)

Complete the multiplication table below and then answer the questions that follow.

x	-5	-4	-3	-2	-1	0	1	2	3	4	5
-5											
-4											
-3											
-2											
-1											
0											
1											
2											
3											
4											
5											

List three patterns you see on the completed table.

1. \_\_\_\_\_
2. \_\_\_\_\_
3. \_\_\_\_\_

# Section H: Student Activity 8

## Division of Integers

x	-5	-4	-3	-2	-1	0	1	2	3	4	5
-5	25	20	15	10	5	0	-5	-10	-15	-20	-25
-4	20	16	12	8	4	0	-4	-8	-12	-16	-20
-3	15	12	9	6	3	0	-3	-6	-9	-12	-15
-2	10	8	6	4	2	0	-2	-4	-6	-8	-10
-1	5	4	3	2	1	0	-1	-2	-3	-4	-5
0	0	0	0	0	0	0	0	0	0	0	0
1	-5	-4	-3	-2	-1	0	1	2	3	4	5
2	-10	-8	-6	-4	-2	0	2	4	6	8	10
3	-15	-12	-9	-6	-3	0	3	6	9	12	15
4	-20	-16	-12	-8	-4	0	4	8	12	16	20
5	-25	-20	-15	-10	-5	0	5	10	15	20	25

Above is the completed table from Student Activity 7.

The circle and the arrows represent division, which is read as

$$12 \div 4 = 3 \text{ or } 12 \div 3 = 4$$

$$25 \div 5 = 5$$

$$(-3) \div (-3) = 1 \text{ or } (-3) \div 1 = (-3)$$

Use the table above to complete the tables on the next page.

# Section H: Student Activity 8(continued)

Table 1		
Division	Result	
$12 \div 4$	= 3	<b>Positive Answer</b>
$25 \div 5$	= 5	<b>Positive Answer</b>
$-3 \div 1$	= -3	
$(-6) \div (-2)$	=	
$(-10) \div 2$	=	
$12 \div (-4)$	=	
$(-8) \div (-2)$	=	
$15 \times (-3)$	=	
$(-20) \div 5$	=	
$10 \div (-2)$	=	

Table 2		
Division	Result	
$(-12) \div 3$	= -4	<b>Negative Answer</b>
$15 \div 5$	=	<b>Positive Answer</b>
$20 \div (-2)$	=	
$8 \div (-4)$	=	
$16 \div (-2)$	= 0	
$(-2) \div 1$	=	
$4 \div 4$	=	
$6 \div 1$	=	
$20 \div (-4)$	=	
$(-20) \div (-10)$	=	

Use the completed tables to fill in the following spaces.

- a) A positive number divided by a positive number gives a \_\_\_\_\_ number.
- b) A negative number divided by a negative number gives a \_\_\_\_\_ number.
- c) A positive number divided by a negative number gives a \_\_\_\_\_ number.
- d) A negative number divided by a positive number gives a \_\_\_\_\_ number

Simplify each of the following.

- a)  $12 \div 3 =$  \_\_\_\_\_
- b)  $-12 \div 2 =$  \_\_\_\_\_
- c)  $-14 \div 7 =$  \_\_\_\_\_
- d)  $(-12) \div (-4) =$  \_\_\_\_\_
- e)  $6 \div -3 =$  \_\_\_\_\_
- f)  $(-24) \div (-6) =$  \_\_\_\_\_
- g)  $-(12 \div 11) =$  \_\_\_\_\_
- e)  $-(32 \div 4) =$  \_\_\_\_\_
- f)  $(-26) \div 9 =$  \_\_\_\_\_

# Appendix 1

## Class Demonstration

- Place an empty box or the outline of a square on the table.  
Ask the students what quantity is in the box/square.  
**Answer:** Nothing/Zero

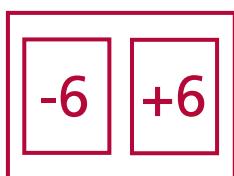

- Place a card with +6 on it in the box.  
Again, ask the students what quantity is in the box.  
**Answer:** 6 or plus 6 or positive 6

- Remove this card and put in a different one with -6 on it.  
Ask the students what quantity is in the box now.  
**Answer:** Minus 6 or take away 6 or negative 6

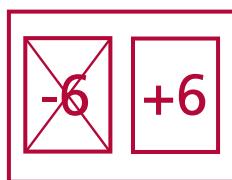

- Place the +6 in the box with the -6.  
Ask the students what quantity is in the box at this stage.  
**Answer:** Nothing/zero

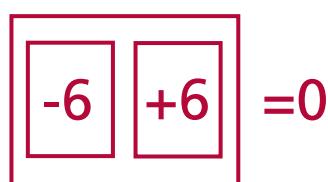

# Appendix 1 (continued)

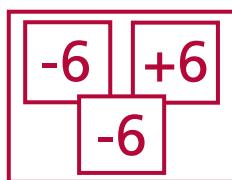

- Repeat this exercise with different integers to reinforce the idea that a '+' and '-' of the same number gives zero.
- Now, write  $-(-6)$  on the board and ask students to tell you what it means.  
**Answer:** Take away minus 6 or minus minus 6 or take away negative 6.
- We have zero in the box and we are going to take away -6.  
 What quantity is left in the box now?  
**Answer:** 6 or +6 or positive 6

- So if we have  $0 - (-6)$ , what is left in the box?  
**Answer:** +6      So  $-(-6)$  is +6  
 Repeat this exercise with different integers to reinforce what is happening.
- Let's try this exercise with a '+' outside the bracket.  
 What quantity is in the box?  
**Answer:** Zero/nothing

- Explain what  $+(-6)$  means.  
**Answer:** Add minus 6/plus negative six/add negative 6
- So if I add  $(-6)$  to the box, what quantity is in there now?  
**Answer:** Negative 6/minus 6

- So if we have  $0 + (-6)$ , what quantity is in the box?  
**Answer:** -6      So  $+(-6)$  is -6

# APPENDIX 2

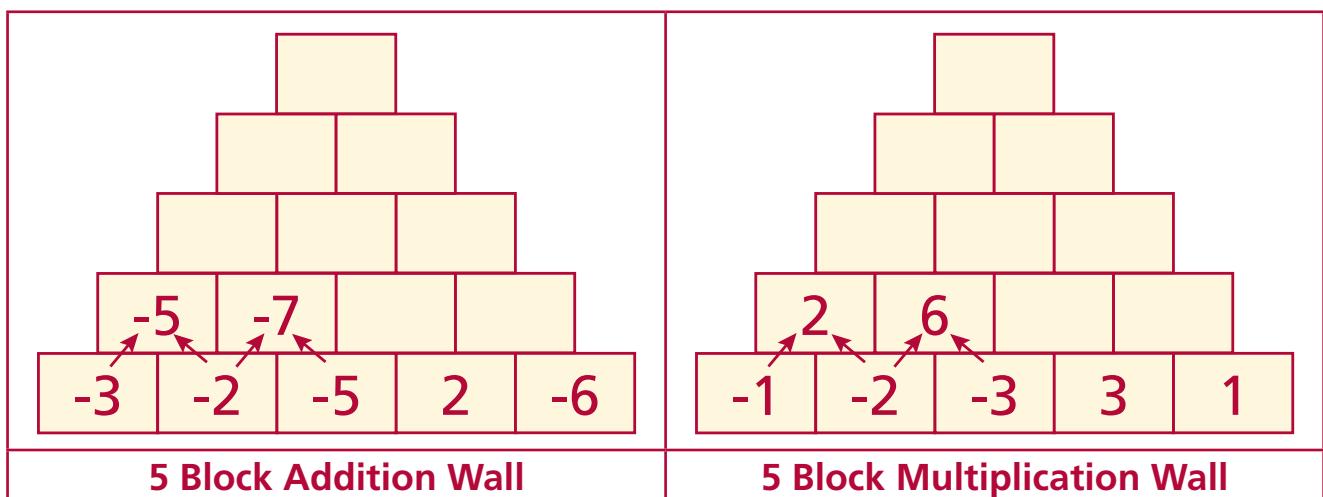

## Mental Maths

### 1. Small white boards

These are small, white, laminated boards approximately 30cm x 20cm. Each student in the class is given one of these boards with a small white board marker and a cloth. The teacher calls out a question such as -4 multiplied by -2. Each student writes down his or her answer and the teacher says "show me". Each student then holds up the board with his or her answer so that the teacher can scan around the room quickly and check to see who is getting the mental maths right or wrong. The teacher then says "wipe" and each student wipes his or her board clean. The teacher proceeds to call out more questions. This enables the teacher to identify students who are having difficulty with a particular aspect of the topic.

### 2. Maths walls

These are useful from the point of view that they hold the students attention over a period of time. Below are two examples of five block walls, one for addition and one for multiplication. You can also have 7, 9,... block walls but these sometimes take too long to complete and therefore do not fall into the "mental maths" category.

**Note:** Keep the integers for the multiplication wall small as wall increases in difficulty with larger integers.
